

PROJECT FORESIGHT

Demand & Inventory Intelligence — Final Project Report

Executive Summary

Team 22 analysed 3,000 records across 100 SKUs for 2024–2025. Total revenue: █26.97 Cr; demand: 107,885; sales: 106,385; stockout records: 31; overstock records: 507; recommended order quantity: 373,375.

Category Findings

Category	Revenue	Demand	Stockouts	Overstock
Apparel	█4.89 Cr	20,100	2	64
Electronics	█2.80 Cr	10,964	0	281
Grocery	█8.61 Cr	33,396	19	0
Home & Kitchen	█4.42 Cr	17,806	1	150
Personal Care	█6.25 Cr	25,619	9	12

Risk & Recommendations

Grocery has the highest stockout-record count; Electronics has the largest overstock burden; Home & Kitchen also shows substantial overstock. Use SKU-level forecast, inventory and lead time signals to prioritise replenishment and clearance reviews.

Forecasting Governance

The supplied workbook contains a 7-day planning forecast. A production-grade claim should include a seasonal-naïve baseline, rolling-origin validation, WAPE and leakage controls. This package does not claim an undocumented independent model/backtest.

Limitations

Live hosting, public repository and video links are account/platform actions and must be completed before submission. Do not use fabricated URLs.
